- Chrome and Edge extensions, MS Outlook Add-in, Android App, iOS App, and web portal available
- Message Recall & message expiry
- Message read, print, delete, forward, and reply tracking
- Attachment preview/download tracking
- Message password (For Your Eyes Only) for ultra-sensitive messages
- Single Sign-on (SSO)
- Document signature designer

**Zix CipherPost Pro's cloud-based encryption, large/secure file transfer and message control is powerful and feature-rich, yet cost-effective and easy to use. It quickly integrates into your email infrastructure using existing email addresses so there is almost no learning curve. CipherPost Pro enables organizations to protect, control and manage the exchange of information, even after content has left the email mailbox.**

## Easy to Use

Zix CipherPost Pro works inside the email environment you are most comfortable using, whether that's Microsoft Outlook, Gmail, mobile apps or a web portal. Internal recipients using CipherPost Pro instantly see messages & files right in their inbox, while external recipients automatically receive invitations and instructions to access the content sent to them.

## Information Rights Management

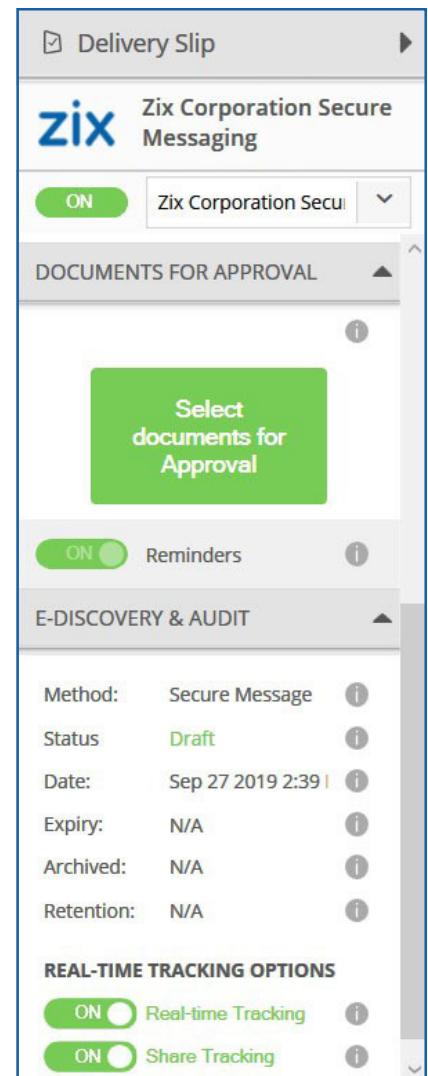

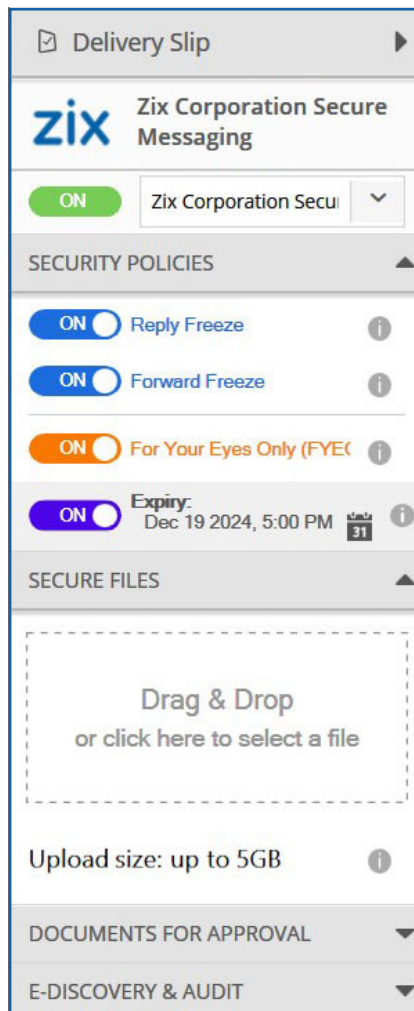

Controls such as Forward Freeze, Reply Freeze, message expiry, and message password for ultra-sensitive messages (For Your Eyes Only) can be applied before messages are sent, and whole messages can always be recalled. These controls are intuitive and consistent across user interfaces. See who opens, reads, forwards, replies or deletes your email message effortlessly with readily available, real-time tracking data.

## Large/Secure File Transfer

Seamlessly attach any file type up to 5GB in size while composing a message. Files are uploaded and downloaded through an encrypted TLS tunnel (encrypted in transit), and are stored encrypted in 4MB chunks for additional security (encrypted at rest). Senders can see when attachments have been previewed and/or downloaded, and sent files can be recalled at anytime.

## Secure e-Signatures

Easily send common document types for e-signature using the built-in, drag & drop signature block designer. Need signatures from multiple people? All recipients in the 'To' field will be required to sign the document. Set a deadline and send reminders to ensure documents are signed on time. When signatures are collected, an e-Signature Certificate is created containing pertinent data (e.g. dates, IP addresses, unique message IDs, etc). QR codes can even be included on the certificate to verify a document's authenticity in real-time from a physical copy.

## About Zix

Zix is a leader in email security. Trusted by the nation's most influential institutions in healthcare, finance and government, Zix delivers a superior experience and easy-to-use solutions for email encryption and data loss prevention, advanced threat protection, archiving and bring your own device (BYOD) security.
